EXPERIMENT 6: LINK JIRA WITH CONFLUENCE

Aim

To integrate Jira with Confluence by displaying project work items, their priorities and statuses, and a summary of project progress on a Confluence project overview page.

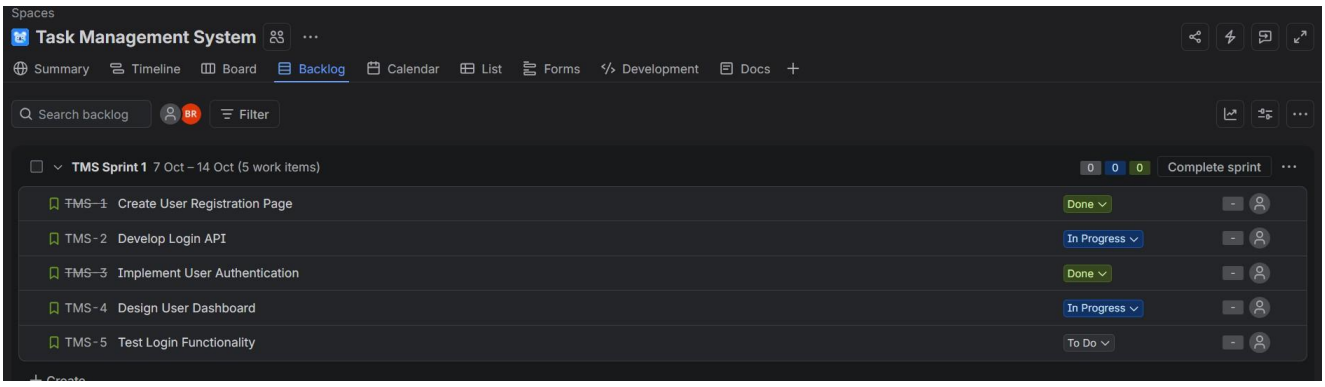

Tools Used

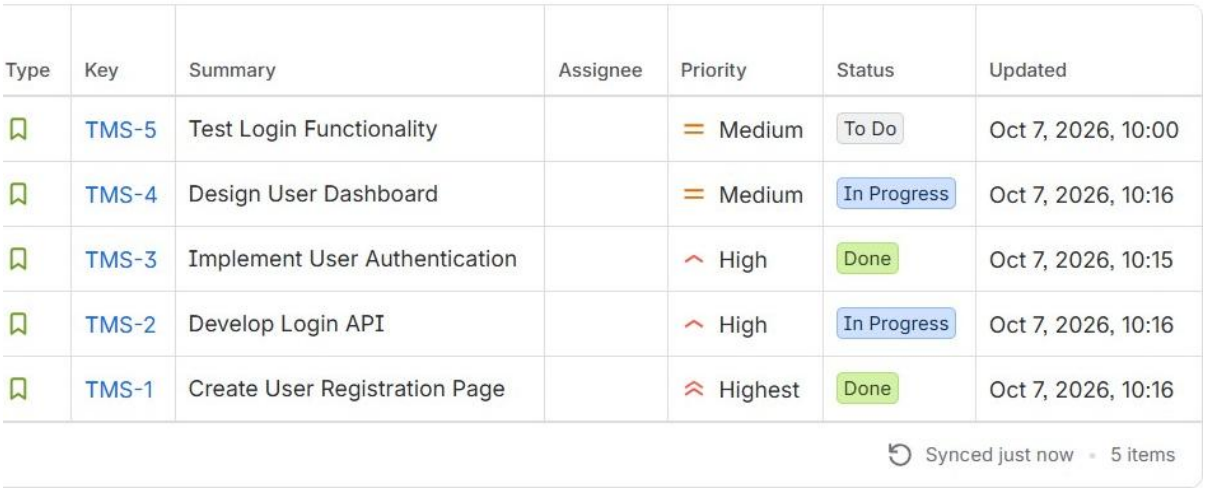

1. Jira
2. Confluence

Procedure

1. Log in to Jira and open the Task Management System project.
2. Create five work items: Create User Registration Page, Develop Login API, Implement User Authentication, Design User Dashboard, and Test Login Functionality.
3. Set suitable priorities for the work items and update their statuses to To Do, In Progress, or Done.
4. Open Confluence and create a page named “Library Management System Project Overview.”
5. Add the project objective and key features to the Confluence page.
6. In the Confluence editor, insert the Jira work items macro and select the Task Management System project.
7. Display the five Jira work items so their keys, summaries, priorities, and statuses are visible.
8. Add a Project Progress section with five total tasks: two Done (40%), two In Progress (40%), and one To Do (20%).
9. Save or publish the Confluence page and check that the Jira issue table and progress summary are displayed correctly.

Output

Type	Key	Summary	Assignee	Priority	Status	Updated
	TMS-5	Test Login Functionality		Medium	To Do	Oct 7, 2026, 10:00
	TMS-4	Design User Dashboard		Medium	In Progress	Oct 7, 2026, 10:16
	TMS-3	Implement User Authentication		High	Done	Oct 7, 2026, 10:15
	TMS-2	Develop Login API		High	In Progress	Oct 7, 2026, 10:16
	TMS-1	Create User Registration Page		Highest	Done	Oct 7, 2026, 10:16

Synced just now • 5 items

Result

Thus, Jira was integrated with Confluence, and the Library Management System project work items, priorities, statuses, and progress summary were displayed on the Confluence project overview page.
